VISHAKHA CITE

India vs china

both are fastest growing economies contributing to global waste generation china has invested in recycling, china's recycling network is more stronger

India vs germany

Germany follows WEEE directive, ensuring systemic collection, segregation and recycling electronic waste.

India vs Japan

Japan operates in most advanced recycling system based on the economy concept, manufacturers, retailers. India still relies heavily on manual dismantling resulting into material loss

India vs UK

It follows EU WEEE directive and established efficient producer responsibility organisations consumers can return electronic waste through authorised collection centres without charges.

India vs US

US generates one of the largest quantities of e waste globally but manages it through certified recycling facilities Better certification systems and monitoring mechanisms.

Methodology to overcome

- Source level collection - consumers should segregate waste at household and deposit it at centre
- Digital tracking system - QR code to introduced to monitor products from manufacture to disposal
- Advanced recycling technologies

AI based sorting
Robotics dismantling
Bioleaching techniques
Hydrometallurgical recovery of metals
